GP 900: Graphene-Enhanced Protection for Marble Surfaces in Coffee Shops & Restaurants

Long-Term Durability, Cleanliness, and Cost Savings

GP 900 is a state-of-the-art, graphene-infused protective coating designed to keep high-traffic marble floors looking pristine and polished, even under the daily challenges of bustling restaurants and coffee shops. Enhanced with graphene, one of the most advanced materials available, GP 900 forms an invisible barrier on marble surfaces, preventing stains from coffee, wine, and other common spills. This durable coating solution is especially valuable for architects designing spaces that demand elegance, cleanliness, and sustainability.

Key Benefits of GP 900 for Coffee Shops, Restaurants, and Beyond:

- **Graphene-Infused Stain Resistance:** The graphene in GP 900 offers robust protection against persistent stains like coffee and red wine. Spills that might otherwise penetrate and stain marble are effectively repelled, keeping floors clean and stain-free even in the busiest of service areas.
- **Enhanced Durability for High Traffic:** GP 900 strengthens marble's resistance to daily wear and tear from heavy foot traffic, furniture movement, and frequent cleaning. The graphene-enhanced layer reinforces marble's natural beauty, preserving its texture and shine without altering its original look and feel.
- **Slip-Resistant Safety:** Safety is critical in high-traffic dining and service areas. GP 900's ultra-thin coating maintains the marble's natural slip resistance, ensuring that both patrons and staff can walk securely, reducing liability risks for businesses.
- **Sustainability and Eco-Friendly Maintenance:** GP 900 aligns with the sustainable goals of restaurants, coffee shops, and architectural projects by reducing the need for harsh chemicals. The graphene-enhanced coating allows for easy cleaning with only water and mild detergents, cutting down on both chemical use and detergent costs. This contributes to a more eco-friendly footprint and meets the high standards of modern, sustainable design.
- **Reduced Water and Chemical Usage:** GP 900's easy-to-clean effect minimizes the amount of water and cleaning solutions required, meaning that maintenance is faster and environmentally responsible. This also reduces the frequency of deep cleaning sessions, saving valuable resources.

Cost Savings and Return on Investment for Dining Establishments

GP 900 provides substantial savings for restaurants and coffee shops by reducing cleaning and maintenance costs while extending the life of marble flooring.

Reference Area	Annual Cleaning Cost (Without Coating)	Cost with GP 900	Annual Savings (%)
Dining Area (500 sq. ft.)	\$2,000.00	\$500.00	75%
Service Counter (200 sq. ft.)	\$1,200.00	\$300.00	75%
Entryway (300 sq. ft.)	\$1,500.00	\$375.00	75%

ROI Calculation: With an average **75% reduction** in annual maintenance and cleaning costs, GP 900 pays for itself within the first year, while offering ongoing savings. The simplified maintenance also frees up staff time, making this an efficient and cost-effective investment.

Ideal Applications for GP 900:

GP 900 is perfect for a variety of high-traffic, high-impact areas in restaurants, coffee shops, and other hospitality settings, such as:

- **Main Dining Areas**
- **Order and Pick-Up Counters**
- **Customer Entryways**
- **Restrooms**
- **Wine Bars and Beverage Stations**

With GP 900, architects and business owners can ensure that marble floors in restaurants, coffee shops, and hospitality spaces remain pristine and low-maintenance. This graphene-enhanced solution combines stain resistance, sustainability, and cost efficiency, creating a long-term investment that enhances both aesthetics and operational savings.
